Breedplan Performance Recording
Scanning Incentives

Recording members are reminded that a scanning incentive of **£5.00** per animal scanned is still available.

Claims for the incentive must be lodged with the Society by the end of the Society’s financial year during which the scanning has taken place, i.e. 1st July – 30th June.

No payments will be made for scanning that has taken place in a previous financial year.

So, please remember, claims for any scanning that take place between the 1st July 2019 and 30th June 2020 must be received by the office no later than 30th June 2020.

*It is also important to remember the following salient points:*

- It is important that all animals within a contemporary group (whether bulls, heifers or steers) are scanned to maximise the amount of comparable data, with the proviso that to maintain accuracy any differences in management are identified.

- Data will only be accepted from an approved scanning technician whose contact details are on the Society’s website under Breedplan - [http://abri.une.edu.au/online/pages/accred_scanners_uk.htm](http://abri.une.edu.au/online/pages/accred_scanners_uk.htm)

- The acceptable scanning age range is 300 to 800 days – however, 400 to 600 days is preferred range.

- All animals must be weighed at the time of scanning and the weights submitted and verified by the scanning technician.

- Scrotal measurements of all bulls must be recorded by the scanning technician and results submitted.

- Important: Should either of the above not be carried out no incentive will be paid.

- Information from heifers and steers is of equal importance to that of bulls – IMF data from heifers is of particular relevance because they mature earlier.
